

Neptune™ Glycol Feeders are designed for the addition of glycol solution to closed-loop chilled or hot water systems to maintain pressure in the loop by making up for losses that occur due to leakage.

Glycol addition is controlled by a pressure switch with adjustable low and high set points\*. When the pressure in the loop reaches the low set point, the pump begins to feed glycol into the system until the high-pressure set point is achieved and the switch stops the pump.

\*The standard pressure switch features the following ranges: Cut-in (low) range: 10-45 psi (0.7-3.1 bar); Cut-out (high) range: 20-60 psi (1.4-4.1 bar); Adjustable differential: 10-30 psi (0.7-2.1 bar). Other pressure switches are available.

#### **SELECTION CHART**

MODEL	DESCRIPTION
G-50-1	Complete system including 1.5 gpm at 100 psi (5.7 L/min at 6.9 bar) pump and low-level light.
G-50-1A	Complete system including 1.5 gpm at 100 psi (5.7 L/min at 6.9 bar) pump, low level light and audible alarm.
G-50-2A	Complete system including two 1.5 gpm at 100 psi (5.7 L/min at 6.9 bar) pumps, low level light and audible alarm. Separate discharge and pressure switches allow feeding two separate closed-loop systems independently from a single tank.
LP	Option to furnish larger pump rated 3.75 gpm at 100 psi (14.2 L/min at 6.9 bar).  Add "LP" to Model Number to specify larger pump; Example G-50-1-LP.
